Federal & State Listing of Fishery Offices

March 1995

146

COMPLETED

U.S. Department of the Interior • Fish and Wildlife Service • Fisheries • Division of Fish Hatcheries

95-035333

The Fish and Wildlife Service has a responsibility to conserve, restore, enhance, and manage the Nation's fishery resources and aquatic ecosystems for the benefit of future generations. Federal stewardship of the Nation's fishery resources has been a core responsibility of the Service for over 120 years.

The Service's Fisheries Program will accomplish this mission by:

- restoring fish populations in interjurisdictional water where stocks are severely threatened;
- maintaining fish populations where portions of their habitat have been permanently altered in such manner as to disrupt the natural life cycle;
- assisting in recovery efforts for candidate, threatened, and endangered fish species and other aquatic species;
- complying with legal responsibilities to mitigate for the effect of Federal water development projects;
- assisting Native American governments in conserving their fishery resources;
- providing the leadership in developing new fish culture technologies and fish health strategies;
- establishing effective partnerships to meet joint Federal/State stewardship responsibilities for our Nation's fishery resources.

Federal & State Listing of Fishery Offices

March 1995

Mollie Beattie
Director
U.S. Fish and Wildlife Service

John G. Rogers
Deputy Director
U.S. Fish and Wildlife Service

Gary B. Edwards
Assistant Director - Fisheries
U.S. Fish and Wildlife Service

Meeting the Challenge

The Service's Action Plan for Fishery Resources and Aquatic Ecosystems incorporates a comprehensive ecosystem approach to conserving, restoring, and enhancing fish resources. The Action Plan is based on scientific management, conservation of natural diversity, effective partnerships, and enhanced public awareness and stewardship. The Plan focuses on aquatic ecosystems where there is a Federal interest (i.e., areas that contain threatened or endangered species, interjurisdictional waters, Federal mitigation projects, National Wildlife Refuges, Tribal lands, military installations, and areas with healthy ecosystems that can be maintained). The Plan will serve as the framework for the Fisheries Program by:

- conserving self sustaining native fish populations for the maintenance of productive fisheries in healthy aquatic habitats,
- maintaining healthy wild populations through genetic diversity, harvest management, habitat improvements, and judicious use of hatchery stocks,
- developing and encouraging partnerships between governments and the private sector to provide greater opportunities for conserving and enhancing aquatic ecosystems and for advancing their stewardship,
- increasing public education and outreach to develop an informed and involved citizenry, serving as a catalyst in ensuring that aquatic resource problems are quickly identified, corrective steps are organized, and action is agreed upon, coordinated, and addressed, and
- assuring long-term ecosystem health while supporting sustainable development of aquatic ecosystems, fishery resources, and compatible recreational, cultural, and other uses.
